

Individual (group) Project

In the process of studying the course, the student must complete an individual project. The project can also be executed as a group project.

The content of the project is to formulate a proposal for the implementation of one of the ITS services in the student's city of residence.

1. The student must choose one of the areas of the urban environment in which there are traffic problems.
2. The student must give a description of the transport problem of the selected fragment of the urban environment.
3. The student must formulate a proposal for using the ITS service to solve this problem:
 - to propose service in accordance with classification of the standard ISO 14813-1,
 - briefly describe the application of the service in a specific situation of the urban environment,
 - specify the purpose of the service,
 - specify the tasks that this service implements,
 - indicate the benefits that are achieved when using this service,
 - indicate the existing limitations or shortcomings when using this service.
4. Based on the results of the individual project, student must prepare a presentation.
5. The presentation must be uploaded to the portal.
