

Analysis of case study of ITS services

1. The student must choose one of the ITS services.
2. Based on a search in literary sources and the Internet, student must find 3 examples of using this service in different cities and countries.
3. For each example of using the ITS service, student must specify:
 - service classification according to the standard ISO 14813-1,
 - briefly describe the application of the service in a specific situation of the urban environment,
 - specify the purpose of the service,
 - specify the tasks that this service implements,
 - indicate the benefits that are achieved when using this service,
 - indicate the existing limitations or shortcomings when using this service.
4. Based on the results of the study, student must prepare a presentation.
5. The presentation must be uploaded to the portal.
